Response to Amendment

1. Applicant's arguments, see page 11, filed 03/30/2009, with respect to the specification have been fully considered and are persuasive. The objection of the specification has been withdrawn.
2. Applicant's arguments, see page 12, filed 03/30/2009, with respect to claim 26 have been fully considered and are persuasive. The objection of claim 26 has been withdrawn.
3. Applicant's arguments, see page 12, filed 03/30/2009, with respect to claims 27, 28, and 31-35 have been fully considered and are persuasive. The rejection of claims 27, 28, and 31-35 has been withdrawn. However, the reconsideration has resulted in a different interpretation of the Boneh reference and is presented below.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 16, 27-29, and 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Boneh et al. "An Efficient Public Key Traitor Tracing Scheme" *Advances in Cryptology – Crypto '99. 19th Annual International Cryptology Conference Proceedings*. Santa Barbara, CA, USA (1999) pages 338-353, hereafter referred to as Boneh.

Regarding claims 16, 29:

Boneh page 340, Definitions ¶ 1 teaches that one unique encryption key can be used for multiple decryption keys.

Boneh page 340, Definitions ¶ 3 and 4 teaches that the encryption and decryption processes can be algorithms.

Boneh pages 338-339, Introduction ¶ 1-2 teaches that each subscriber has a unique set of keys that identify that particular subscriber and allow for the decryption of a broadcast.

Regarding claim 27, 28:

Boneh pages 338-339, Introduction ¶ 1-3 shows the keys being stored in and used by a distributor to encrypt data before the data is sent to a corresponding receiver.

Claim Rejections - 35 USC § 103

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
7. Claims 17 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boneh in view of Gazier et al. (U.S. Patent No. 6,880,088), hereafter referred to as Gazier.

Regarding claim 17:

Boneh discloses the method of claim 16, but fails to explicitly disclose a system that can process non-redundant data.

Gazier column 2, lines 57-59 shows that it is common for secure communication networks to process non-redundant data.

It would have been obvious to one of ordinary skill in the art at the time of the invention to improve Boneh by allowing the system to process non-redundant data, as disclosed in Gazier, to allow for the conservation of bandwidth.

Regarding claim 31:

Boneh pages 338-339, Introduction ¶ 1-3 shows the keys being stored in and used by a distributor to encrypt data before the data is sent to a corresponding receiver.

Allowable Subject Matter

8. Claims 18-26, 30, and 32-35 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
